**Excerpt from *Women and Economics* (1898)<sup>1</sup>**  
*Charlotte Perkins Gilman*

We are the only animal species in which the female depends on the male for food, the only animal species in which the sex-relation is also an economic relation. With us an entire sex lives in a relation of economic dependence upon the other sex, and the economic relation is combined with the sex-relation. The economic status of the human female is relative to the sex-relation.

It is commonly assumed that this condition also obtains among other animals, but such is not the case. There are many birds among which, during the nesting season, the male helps the female feed the young, and partially feeds her; and, with certain of the higher carnivora, the male helps the female feed the young, and partially feeds her. In no case does she depend on him absolutely, even during this season, save in that of the hornbill, where the female, sitting on her nest in a hollow tree, is walled in with clay by the male, so that only her beak projects; and then he feeds her while the eggs are developing. But even the female hornbill does not expect to be fed at any other time. The female bee and ant are economically dependent, but not on the male. The workers are females, too, specialized to economic functions solely. And with the carnivora, if the young are to lose one parent, it might far better be the father: the mother is quite competent to take care of them herself. With many species, as in the case of the common cat, she not only feeds herself and her young, but has to defend the young against the male as well. In no case is the female throughout her life supported by the male.

In the human species the condition is permanent and general, though there are exceptions, and though the present century is witnessing the beginnings of a great change in this respect. We have not been accustomed to face this fact beyond our loose generalization that it was "natural," and that other animals did so, too.

To many this view will not seem clear at first; and the case of working peasant women or females of savage tribes, and the general household industry of women, will be instanced against it. Some careful and honest discrimination is needed to make plain to ourselves the essential facts of the relation, even in these cases. The horse, in his free natural condition, is economically independent. He gets his living by his own exertions, irrespective of any other creature. The horse, in his present condition of slavery, is economically dependent. He gets his living at the hands of his master; and his exertions, though strenuous, bear no direct relation to his living. In fact, the horses who are the best fed and cared for and the horses who are the hardest worked are quite different animals. The horse works, it is true; but what he gets to eat depends on the power and will of his master. His living comes through another. He is economically dependent. So with the hard-worked savage or peasant women. Their labor is the property of another: they work under another will; and what they receive depends not on their labor, but on the power and will of another. They are economically dependent. This is true of the human female both individually and collectively.

In studying the economic position of the sexes collectively, the difference is most marked. As a social animal, the economic status of man rests on the combined and exchanged services of vast numbers of progressively specialized individuals. The economic progress of the race, its

maintenance at any period, its continued advance, involve the collective activities of all the trades, crafts, arts, manufactures, inventions, discoveries, and all the civil and military institutions that go to maintain them. The economic status of any race at any time, with its involved effect on all the constituent individuals, depends on their world-wide labors and their free exchange. Economic progress, however, is almost exclusively masculine. Such economic processes as women have been allowed to exercise are of the earliest and most primitive kind. Were men to perform no economic services save such as are still performed by women, our racial status in economics would be reduced to most painful limitations.

To take from any community its male workers would paralyze it economically to a far greater degree than to remove its female workers. The labor now performed by the women could be performed by the men, requiring only the setting back of many advanced workers into earlier forms of industry; but the labor now performed by the men could not be performed by the women without generations of effort and adaptation. Men can cook, clean, and sew as well as women; but the making and managing of the great engines of modern industry, the threading of earth and sea in our vast systems of transportation, the handling of our elaborate machinery of trade, commerce, government—these things could not be done so well by women in their present degree of economic development.

This is not owing to lack of the essential human faculties necessary to such achievements, nor to any inherent disability of sex, but to the present condition of woman, forbidding the development of this degree of economic ability. The male human being is thousands of years in advance of the female in economic status....

Studied individually, the facts are even more plainly visible, more open and familiar. From the day laborer to the millionaire, the wife's worn dress or flashing jewels, her low roof or her lordly one, her weary feet or her rich equipage—these speak of the economic ability of the husband. The comfort, the luxury, the necessities of life itself, which the woman receives, are obtained by the husband, and given her by him. And, when the woman, left alone with no man to "support" her, tries to meet her own economic necessities, the difficulties which confront her prove conclusively what the general economic status of the woman is. None can deny these patent facts—that the economic status of women generally depends upon that of men generally, and that the economic status of women individually depends upon that of men individually, those men to whom they are related. But we are instantly confronted by the commonly received opinion that, although it must be admitted that men make and distribute the wealth of the world, yet women earn their share of it as wives. This assumes either that the husband is in the position of employer and the wife as employee, or that marriage is a "partnership," and the wife an equal factor with the husband in producing wealth....

Women consume economic goods. What economic product do they give in exchange for what they consume? The claim that marriage is a partnership, in which the two persons married produce wealth which neither of them, separately, could produce, will not bear examination. A man happy and comfortable can produce more than one unhappy and uncomfortable, but this is as true of a father or son as of a husband. To take from a man any of the conditions which make him happy and strong is to cripple his industry, generally speaking. But those relatives who make him happy are not therefore his business partners, and entitled to share his income.

Grateful return for happiness conferred is not the method of exchange in a partnership. The comfort a man takes with his wife is not in the nature of a business partnership, nor are her frugality and industry. A housekeeper, in her place, might be as frugal, as industrious, but would

not therefore be a partner. Man and wife are partners truly in their mutual obligation to their children—their common love, duty, and service. But a manufacturer who marries, or a doctor, or a lawyer, does not take a partner in his business, when he takes a partner in parenthood, unless his wife is also a manufacturer, a doctor, or a lawyer. In his business, she cannot even advise wisely without training and experience. To love her husband, the composer, does not enable her to compose; and the loss of a man's wife, though it may break his heart, does not cripple his business, unless his mind is affected by grief. She is in no sense a business partner, unless she contributes capital or experience or labor, as a man would in like relation. Most men would hesitate very seriously before entering a business partnership with any woman, wife or not.

If the wife is not, then, truly a business partner, in what way does she earn from her husband the food, clothing, and shelter she receives at his hands? By house service, it will be instantly replied. This is the general misty idea upon the subject—that women earn all they get, and more, by house service. Here we come to a very practical and definite economic ground. Although not producers of wealth, women serve in the final processes of preparation and distribution. Their labor in the household has a genuine economic value.

For a certain percentage of persons to serve other persons, in order that the ones so served may produce more, is a contribution not to be overlooked. The labor of women in the house, certainly, enables men to produce more wealth than they otherwise could; and in this way women are economic factors in society. But so are horses. The labor of horses enables men to produce more wealth than they otherwise could. The horse is an economic factor in society. But the horse is not economically independent, nor is the woman. If a man plus a valet can perform more useful service than he could minus a valet, then the valet is performing useful service. But, if the valet is the property of the man, is obliged to perform this service, and is not paid for it, he is not economically independent.

The labor which the wife performs in the household is given as part of her functional duty, not as employment. The wife of the poor man, who works hard in a small house, doing all the work for the family, or the wife of the rich man, who wisely and gracefully manages a large house and administers its functions, each is entitled to fair pay for services rendered.

To take this ground and hold it honestly, wives, as earners through domestic service, are entitled to the wages of cooks, housemaids, nursemaids, seamstresses, or housekeepers, and to no more. This would of course reduce the spending money of the wives of the rich, and put it out of the power of the poor man to "support" a wife at all....

But the salient fact in this discussion is that, whatever the economic value of the domestic industry of women is, they do not get it. The women who do the most work get the least money, and the women who have the most money do the least work. Their labor is neither given nor taken as a factor in economic exchange.... We are told that the duties and services of the mother entitle her to support.

If this is so, if motherhood is an exchangeable commodity given by women in payment for clothes and food, then we must of course find some relation between the quantity or quality of the motherhood and the quantity and quality of the pay. This being true, then the women who are not mothers have no economic status at all; and the economic status of those who are must be shown to be relative to their motherhood. This is obviously absurd. The childless wife has as much money as the mother of many—more; for the children of the latter consume what would otherwise be hers; and the inefficient mother is no less provided for than the efficient one. Visibly, and upon the face of it, women are not maintained in economic prosperity proportioned to their

motherhood. Motherhood bears no relation to their economic status.... Are we willing to consider motherhood as a business, a form of commercial exchange? Are the cares and duties of the mother, her travail and her love, commodities to be exchanged for bread?

It is revolting so to consider them; and, if we dare face our own thoughts, and force them to their logical conclusion, we shall see that nothing could be more repugnant to human feeling, or more socially and individually injurious, than to make motherhood a trade. Driven off these alleged grounds of women's economic independence; shown that women, as a class, neither produce nor distribute wealth; that women, as individuals, labor mainly as house servants, are not paid as such, and would not be satisfied with such an economic status if they were so paid; that wives are not business partners or co-producers of wealth with their husbands, unless they actually practise the same profession; that they are not salaried as mothers, and that it would be unspeakably degrading if they were—what remains to those who deny that women are supported by men? This (and a most amusing position it is)—that the function of maternity unfits a woman for economic production, and, therefore, it is right that she should be supported by her husband....

... Because of her maternal duties, the human female is said to be unable to get her own living. As the maternal duties of other females do not unfit them for getting their own living and also the livings of their young, it would seem that the human maternal duties require the segregation of the entire energies of the mother to the service of the child during her entire adult life, or so large a proportion of them that not enough remains to devote to the individual interests of the mother.

Such a condition, did it exist, would of course excuse and justify the pitiful dependence of the human female, and her support by the male. As the queen bee, modified entirely to maternity, is supported, not by the male, to be sure, but by her co-workers, the "old maids," the barren working bees, who labor so patiently and lovingly in their branch of the maternal duties of the hive, so would the human female, modified entirely to maternity, become unfit for any other exertion, and a helpless dependant.

Is this the condition of human motherhood? Does the human mother, by her motherhood, thereby lose control of brain and body, lose power and skill and desire for any other work? Do we see before us the human race, with all its females segregated entirely to the uses of motherhood, consecrated, set apart, specially developed, spending every power of their nature on the service of their children?

We do not. We see the human mother worked far harder than a mare, laboring her life long in the service, not of her children only, but of men; husbands, brothers, fathers, whatever male relatives she has; for mother and sister also; for the church a little, if she is allowed; for society, if she is able; for charity and education and reform—working in many ways that are not the ways of motherhood.

It is not motherhood that keeps the housewife on her feet from dawn till dark; it is house service, not child service. Women work longer and harder than most men, and not solely in maternal duties....

In spite of her supposed segregation to maternal duties, the human female, the world over, works at extra-maternal duties for hours enough to provide her with an independent living, and then is denied independence on the ground that motherhood prevents her working! ...

... A human female, healthy, sound, has twenty-five years of life before she is a mother, and should have twenty-five years more after the period of such maternal service as is expected of her has been given....

... The women whose splendid extravagance dazzles the world, whose economic goods are the greatest, are often neither houseworkers nor mothers, but simply the women who hold most power over the men who have the most money. The female of genus homo is economically dependent on ,the male. He is her food supply.
